

Reading Comprehension

Artificial Intelligence

(1) Artificial Intelligence (AI) has become an important part of modern life. It refers to the ability of machines and computer systems to perform tasks that normally require human intelligence, such as learning, problem-solving, understanding language and recognising patterns. From voice assistants on smartphones to recommendation systems on websites, AI is being used in many areas of our daily lives.

(2) AI has also brought significant changes to education. Intelligent learning platforms can understand the strengths and weaknesses of students and provide learning material according to their needs. AI-based tools can help students practise difficult topics, receive instant feedback and learn at their own pace. Teachers can also use AI to prepare learning resources and identify areas where students need additional support.

(3) Apart from education, AI is being used in healthcare, agriculture, transport and scientific research. In healthcare, AI can assist doctors in analysing medical images and identifying certain diseases. In agriculture, it can help farmers monitor crops, predict weather conditions and use water more efficiently. AI-powered systems can also improve road safety by assisting drivers and managing traffic.

Reading Comprehension

Artificial Intelligence — Passage Continued

(4) However, the rapid growth of AI also creates challenges. Some people are concerned that excessive dependence on AI may reduce human creativity and critical thinking. There are also concerns about privacy, incorrect information and the possible loss of certain jobs because of automation. Therefore, AI should be used carefully and responsibly. Humans must remain responsible for important decisions and ensure that technology is used for the benefit of society.

(5) AI is neither completely good nor completely harmful. Its impact depends largely on how people develop and use it. If used wisely, AI can save time, improve efficiency and help solve complex problems. At the same time, people must develop the skills needed to work alongside technology. A balanced approach can help society enjoy the advantages of AI while reducing its possible risks.

Reading Comprehension

Questions

Answer the following questions based on the passage above:

I. What does AI help machines and computers do?

- (A) Only play games
- (B) Perform tasks that normally require human intelligence
- (C) Only store information
- (D) Only make phone calls

II. How can AI help students in their studies?

- (A) By giving them holidays
- (B) By providing learning material and instant feedback
- (C) By replacing all teachers
- (D) By making students study all day

III. Mention **any two areas** other than education where AI is being used.

IV. How can AI help farmers?

- (A) By monitoring crops and helping use water efficiently
- (B) By replacing all farmers
- (C) By increasing the price of crops
- (D) By stopping changes in weather

V. Complete the following sentence:

AI can help students learn at their own _____.

VI. What are two problems that can arise from the excessive use of AI?

VII. Choose the correct meaning of “**used wisely**” in paragraph (5):

- (A) Used carefully and responsibly
- (B) Used without any rules
- (C) Used only by scientists
- (D) Used as much as possible

VIII. Why should people use AI carefully?

- (A) Because AI is always expensive
- (B) Because AI can have some risks and challenges
- (C) Because AI cannot save time
- (D) Because AI is useful only in education
